THE DESIGN PROCESS

| | | | | | | | |
|---|--------------------------------|--|--|---|-----------------------|---------------------------|---------------------|
| Drawn By: Whirlwind Wheelchair International | Approval Date: Not Approved | Material: See individual part sheets | Stock Dimensions: See individual part sheets | Finish: Debur, round all edges, clean brazed areas | Approx. Scale: 1:6 | Sheet Number: 13 of 14 | Sheet Format: A4 |
| Project Title: Ultra Liviano Wheelchair | Drawn By: C Howard | Description: The Side Frame Assembly dictates the chair's form and critically affects the wheelchair's overall quality. | UNLESS OTHERWISE SPECIFIED DIMENSIONS ARE IN MILLIMETERS TOLERANCES: LINEAR: ±0.5 ANGULAR: ±5° | | | | |
| Part Title: Side Frame - General Assembly | Part Number: SFA | Additional Information: | © Whirlwind Wheelchair International | | | | |
| Part Created Date: 12/12/2003 | Quantity: 2 | Revision and Revision Date: 3 on 2/1/2004 | | | | | |

- **Creativity and Analytical skills**
 - Great engineers know when to use both
 - Know when to use enough
 - **Both can be improved with practice**
- **Have a passion for what you do**

POWER OF THE DESIGN PROCESS

- **Break down a complex system into manageable chunks**
- **Applicable to any system, in any area of engineering (or any other project)**

- **Make engineering choices for a reason**
 - “Determine” what best engineering decision
 - Example Factors: cost, size, time, color, etc.
- **Manage your projects effectively**
 - Time, money, performance
- **Always have a backup plan**
 - First rule of engineering – it rarely works perfectly the first time

MONITOR COST VS. PERFORMANCE

- Use your energy effectively to achieve worthwhile performance

- Don't reinvent the wheel if you are only go 1% faster
- Cost is not just money, it is also time spent

Start vague and gradually become specific

1. **Strategy:** A **PLAN** of how to do something (with no specific embodiment)
2. **Concept:** Idea for **DEVICE** to fulfill need (rough physical picture)
3. **Module:** Important aspect of design (ex-linkage, motor, color scheme)
4. **Component:** Specific part design

THE DETERMINISTIC DESIGN PROCESS

Deterministic Design: *Funnels: Strategies* *Concepts* *Modules* *Components*

- Deterministic Design leaves LOTS of room for the wild free creative spirit, and LOTS of room for experimentation and play
- Deterministic Design is a catalyst to funnel creativity into a *successful* design

Strategy: Plan or tactics to score but there may be many different types of machines that could be used

Concept: An idea for a specific machine that can execute a strategy

Module: A sub assembly of a machine that by itself executes a certain function

Component: An individual part

- It is OK to iterate...
 - A *goal* is to never have to backtrack
 - A good engineer, however, knows when its time to let go...

FRDPARRC: Your new best friend

- **FR** = **Functional Requirements** (**WHAT** the design has to do)
- **DP** = **Design Parameters** (**HOW** the design is going to meet the FR)
- **A** = **Analysis** (justify your decisions; can be qualitative or quantitative)
- **R** = **Research** (don't reinvent the wheel)
- **R** = **Risk** (what is going to bit you in the ass if it doesn't work?)
- **C** = **Countermeasure** (If S*#T hits fan, how can you maintain progress?)

Identify your Design Freedoms: What elements of the local environment or available resources can you capitalize on?

Identify your Design Constraints: What material/processes/resources/knowledge/etc can you absolutely not use?

IT'S TIME TO DESIGN!

Example: FR – Allow a person who is disabled to have mobility

CHOOSING PROJECT TEAMS

[See the proposed projects list]

HOMWORK FOR NEXT WEEK

- **Read “Nothing about us without us”**
 - Focus on designing for specific problems and utilizing local materials
- **Read “2.007 Design Process notes”**
- **Watch remainder of workshop movies**
- **Coordinate with lab instructor and choose lab time**
 - I will email each team who their lab instructor is and make email lists
- **Email mentors and community partners**
- **Start working on defining functional requirements for your project**
 - Ask your community partners and mentors for input
