QUALITY

Manufacture

Outline

1. What is quality?
2. Variations
3. Statistical representation
4. Robustness

Read Chapter 35 & 36

What is quality?

Variations

1. Part and assembly variations
2. Variations in conditions of use
3. Deterioration

Variable Outcome

Results from measuring intermediate or final process outcome

Outcome examples

- Shaft O.D. (inches)
- Hole distance from reference surface (mm)
- Circuit resistance (ohms)
- Heat treat temperature (degrees)
- Railcar transit time (hours)
- Engineering change processing time (hours)

- Unit of measure (mm, kg, etc.)
- The measurement method must produce accurate and precise results over time

Technological Development

- Physical masters
- Engineering drawings
- Go / No-Go gage
- Statistical measurement
- Continuous on-line measurement

2.008 - Spring 2004

7

Engineered Part

- Design specification
 $\pm 0.004"$

Manufacturing Outcome: Central Tendency

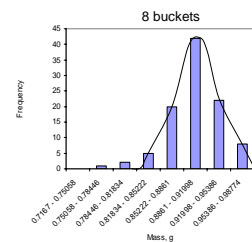

2.008 - Spring 2004

11

Central Tendency

Halloween M&M mass histograms: n = 100

2.008 - Spring 2004

12

Dispersion

Mass of Halloween M&M's, g, n=100

Statistical Distribution

- Central tendency
 - Sample mean (arithmetic): $\bar{x} = \frac{\sum_{i=1}^n x_i}{n}$
 - Sample median
- Measures of dispersion
 - Standard deviation: $s = \sqrt{\frac{\sum_{i=1}^n (x_i - \bar{x})^2}{n}}$
 - Variance: $s^2 = \frac{\sum_{i=1}^n (x_i - \bar{x})^2}{n}$
 - Range

Normal Probability Density Function

$$f(x) = \frac{1}{\sqrt{2\pi}s} \cdot e^{-\frac{(x-\bar{x})^2}{2s^2}}$$

Probability

$$P\{a \leq x \leq b\} = \int_a^b f(x) dx$$

$$P\{-\infty < x < \infty\} = \int_{-\infty}^{\infty} f(x) dx = 1 \text{ For all } \bar{x}, s$$

Normalized

$$z = \frac{x-\bar{x}}{s}$$

$$P\{z_1 \leq z \leq z_2\} = \int_{z_1}^{z_2} \frac{1}{\sqrt{2\pi}} e^{-\frac{z^2}{2}} dz$$

Normal Distribution Example

Take a M&M with mass = 0.9g, based on our calculated normal curve, how many M&M's have a mass greater than 0.9g?

$$Z = \frac{x - \bar{x}}{s}$$

$$Z = (0.9 - 0.89876) / 0.04255 = 0.29$$

Area to the right of Z=0.29, from table on previous page:
 $P = (1 - 0.6141) = 0.3859$

So, the number of M&M's with a mass greater than 0.9g
 $\# = P * n = 0.3859 * 100 = 39$
