

MITOCW | MIT15_071S17_Session_7.1.01_300k

This week, we'll be discussing the power of visualizations for understanding worldwide trends and for using analytics to stop crime.

In the first lecture, we'll use data from the World Health Organization to create visualizations that help us understand and communicate global health trends.

In the second lecture, we'll discuss predictive policing, and how police departments across the country are using data and analytics to improve decision making.

Through these examples, we'll create visualizations in R that help us understand our data and our models.

Let's get started.
